agricultural use,Cultivable waste,Other fallow, Net sown area, Area sown more than once all these showed increasing trends.

AGRICULTURAL LAND USE PATTERN IN NASHIK DISTRICT OF ...

In addition to the alleged shift from traditional to monoculture-style agriculture, another important land-use change has been the recent conversion of paddy land into simple agroforests and other agricultural crops (Guillerme et al., 2011). It is important to note that new agroforests are often fundamentally different than traditional homegarden agroforests, as the latter are, by definition, intensively managed, more complex, and much older.

Agricultural land-use change in Kerala, India ...

Changes in land use can be categorized by the complex interaction of structural and behavioral factors associated with technological capacity, demand, and social relations that affect both environmental capacity and the demand, along with the nature of the environment of interest (Verburg et al., 2004).

Land use change mapping and analysis using Remote Sensing ...

The major drivers of land degradation are climate, notably drought, and population density. The pressures include natural resource management and land use/cover change. A Landsat archive analysis showed an increase in agricultural land use from 31% to 50%, mostly at the expense of forests, from 1990 to 2019.

Land | An Open Access Journal from MDPI

If we extend our land coverage above from arable land use to total agricultural land (which is the sum of arable, permanent crops and pastures and meadows), we still see overall declines in land per person but with different rates and patterns of reduction. Overall, we see that agricultural land

per person is higher than that of arable land.

Land Use - Our World in Data

Cropping pattern change was analyzed in a spatial and quantitative way for the 16 years and for this, Integrated Land and Water Information System (ILWIS) and Land Change Modular (LCM) of IDRISI Andes were used. The results showed that in the area, mono crop cultivation was found in summer, but in winter, areas

Spatial Dynamics of Cropland and Cropping Pattern Change ...

Climate change and agriculture are interrelated processes, both of which take place on a global scale. Global warming affects agriculture in a number of ways, including through changes in average temperatures, rainfall, and climate extremes (e.g., heat waves); changes in pests and diseases; changes in atmospheric carbon dioxide and ground-level ozone concentrations; changes in the nutritional quality of some foods; and changes in sea level.

Climate change and agriculture - Wikipedia

Land use change is a process by which human activities transform the natural landscape, referring to how land has been used, usually emphasizing the functional role of land for economic activities. Land use changes are often nonlinear and might trigger feedbacks to the system, stress living conditions, and threaten people with vulnerability.

Land Use Change - an overview | ScienceDirect Topics

Cropping Patterns. Changes in land use over a period of time can be classified as: (1) conversion of land from one use category to another (for example, land is shifted from agricultural uses to nonagricultural uses; (2) changes in land use within a given land use category (for example, agricultural land is shifted from one crop to another); and (3) changes in land use intensity (for
